Best Practice: 02

Title of the Practice: "The Art of Publication"

Objective of the Practice:

1. To explore new knowledge on specific topics and enhance students' presentation skills, enabling them to achieve deeper insights.
2. To foster a culture of research among students, encouraging the discovery of new findings, theories, and methodologies.

The Context:

Student-centric activities are essential for the holistic development of students. The Government of India has initiated various research programs for young researchers to cultivate a spirit of inquiry and innovation. Aligning with this vision, our institution has developed a program to inspire, motivate, and guide students to think critically, ideate creatively, and implement their ideas effectively.

The Practice:

Our college actively encourages students to participate in research conferences hosted by various institutions. To prepare students for these opportunities, we conduct student development programs focused on research methodology. All formative activities within our institution aim to nurture students, helping them grow intellectually, academically, and personally.

Our students have successfully participated in research paper presentations and publications, showcasing their skills and ideas. Additionally, we provide continuous support and guidance to our faculty members for their research publications. This dual approach strengthens the research abilities of students and faculty alike, fostering a fertile environment for innovation and development.

Evidence of the Success:

- Published research paper
- Certificate of participation and presentation

Problem Encountered and Resources Required

1. **Financial Constraints:**

   Participating in conferences and publishing research papers often involves registration fees and travel expenses, which may not always be affordable for students.

2. **Fear of Rejection:**

   Many students hesitate to submit their work for publication or presentation due to the fear of criticism or rejection, affecting their confidence.

3. **Access to Resources:**

   Limited access to journals, research databases, and other academic resources creates obstacles in conducting comprehensive research.

1. **Financial Constraints:**

   Participating in conferences and publishing research papers often involves registration fees and travel expenses, which may not always be affordable for students.
